The above table highlights the return of the S&P 500 Index for the six months following 13 different days where the return was less than September 15, 2008. The six month average was 12.62% for the 13 periods since 1950.

Historically, stocks have rebounded solidly following extreme periods of volatility. Overly large single day declines have typically preceded strong equity returns over the following several months. We encourage investors to stay the course and not react to emotions as stocks typically experience strong returns following periods of extreme pessimism.
